

SR. OUTRIGGER HOLDERS

The Lee Sr. Outrigger is the strongest, most dependable, and most versatile outrigger holder on the market. Tested and proven by years of fishing by professionals. Our outriggers are backed by over 60 years of fishing tackle experience.

Made entirely of high strength brass forgings (no castings are used) with precision swivel joints that allow for maximum movement and greater flexibility, the Lee Sr. Outrigger, unlike other outriggers, does not have to be fished at any set angle but can be instantly adjusted to any fishing angle or completely lowered for passing under bridges. The two sliding clamps lock the outrigger in all positions.

All adjustments can be made while standing in the cockpit. Stop collars for pre-setting fishing position and laydown hooks for holding the outrigger in the horizontal position are furnished. Outriggers are securely held to the side of boat when in upright position by hinged holding brackets.

The main tube of the outrigger is 2" diameter heavywall stainless steel and comes in three lengths, 4 ft., 6 ft., and 8 ft. The length of the braces increase with the length of the main tube. The standard mounting procedure places one of the swivel-joint braces and the main tube on the deck. However, if desired, the entire outrigger can be mounted on the side of the boat.

Our AP-322 or AP-325 aluminum outrigger poles with double-cross spreaders are recommended for these outrigger holders. Our poles, whose workmanship compliments that of the holders, can be easily removed from the holder for storage or repair. A maximum overall length of 33 ft. is achieved when the 8 ft. Sr. Outrigger Holder is used with the 25 ft. poles. Other lengths are possible by using other combinations of holders and poles.
